

A notebook as a file

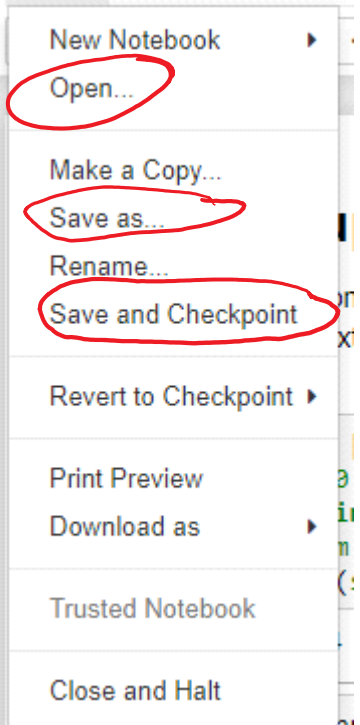

Saturday, May 4, 2019 8:37 PM

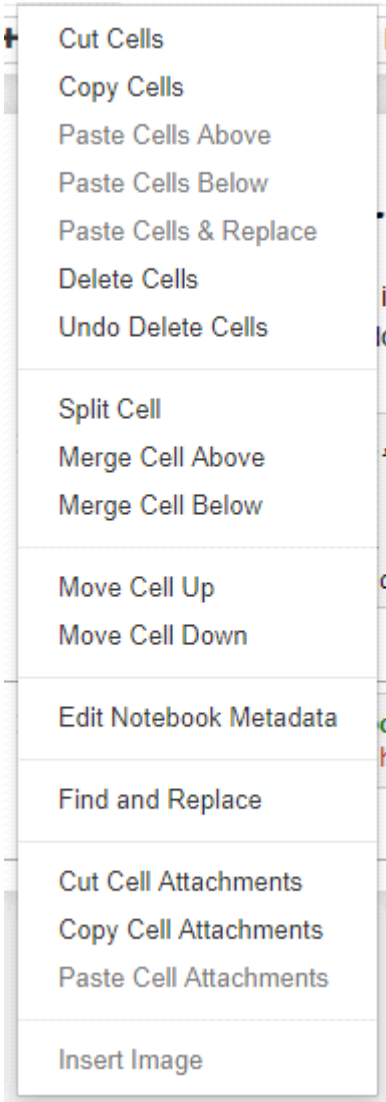

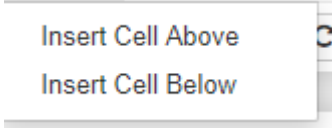

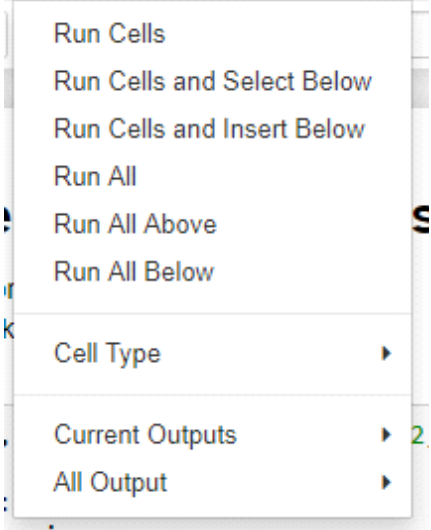

One of the major powers of Jupyter: notebooks can be saved, exchanged, and shared with others.

- The **file menu** allows for saving of notebooks against future need.
- If you install the standard distribution, files must be saved inside its directories. You can move them after saving them.
- You will need to save your notebooks before submitting them as homework in this class.

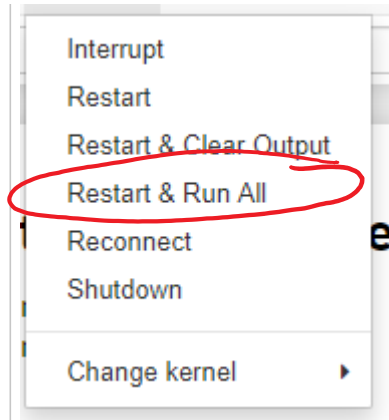

The menus

| File |  A screenshot of the 'File' menu in Jupyter Notebook. The menu items are: 'New Notebook', 'Open...', 'Make a Copy...', 'Save as...', 'Rename...', 'Save and Checkpoint', 'Revert to Checkpoint', 'Print Preview', 'Download as', 'Trusted Notebook', and 'Close and Halt'. The items 'Open...', 'Save as...', and 'Save and Checkpoint' are circled in red. | Save and restore |
